

Long Vuong

Full-stack Developer

longvuong.ca | long.t.vuong@gmail.com | 437-989-7599 | Toronto, ON, Canada

Summary

Full-stack developer with a background in digital analytics with a passion for problem-solving and tackling impactful challenges.

Technical Skills

Frontend: React, JavaScript, Typescript, HTML/CSS

Backend: Flask, Python

Databases: PostgreSQL, Transact-SQL

Additional Tools: Git, Google Analytics 4, Google Tag Manager, Tableau

Experience

Implementation Specialist at ClickInsight | Toronto, April 2022 – May 2024

- Worked with digital analysts and stakeholders to refine and finalize user stories/user tasks to ensure requirements of measurement plans are correctly implemented
- Implemented analytics tracking, ranging from ready-made to highly customized e-commerce tracking solutions for clients, and providing post-implementation technical support, including post-launch testing
- Modernized existing custom JavaScript analytics code on-demand, following best JavaScript practices, as part of the migration from Universal Analytics (UA) to Google Analytics 4 (GA4)
- Provided on-demand troubleshooting and updates to existing analytics tracking to suit clients' new/existing marketing campaigns/strategies
- Integrated Google Tag Manager (GTM) into clients' marketing suites to simplify analytics management, allowing for faster turnaround time for analytics tracking that require frequent updates
- Maintained company's digital presence by updating/backing up WordPress (WP) site and plug-ins, updating site content/layout, and managed blog posts with WP's CMS
- Mentored and provided further technical training in GA4/GTM to junior team members

Projects

Ontario Hydro Plan Comparison | Flask, Python, SQLite, Pandas, JavaScript, PythonAnywhere.com, Plotly

[Link to project](#)

- A full-stack Flask application hosted on PythonAnywhere.com that visualizes the daily cost of all three energy plans based on a user's [Green Button](#) usage data. XML data is sent to a Flask REST API backend where it is loaded and transformed in Python using Pandas and finally inputted into the Plotly graphing library to visualize and gain insights on the data.

YouTube Stats Collector | Flask, Python, JavaScript, PythonAnywhere.com, YouTube API

[Link to project](#)

- A Flask application hosted on PythonAnywhere.com that collects a YouTube channel/playlist statistic for exploratory analysis. URL links to YouTube channels/playlists are sent to a Flask REST API backend, where Python further parses the required parameters to make requests to the YouTube API for channel/playlist data. This data is then structured into a CSV file for download and can be used for visualization exercises, ML training data or other data science exercises.

Education

Juno College of Technology | Web Development Immersive Program, 2021 - 2022

University of Toronto | Honours Bachelor of Science, 2015 - 2020
